

QUICK TIPS

Adding crop marks into an existing PDF file:

More Production >
Set Page Boxes

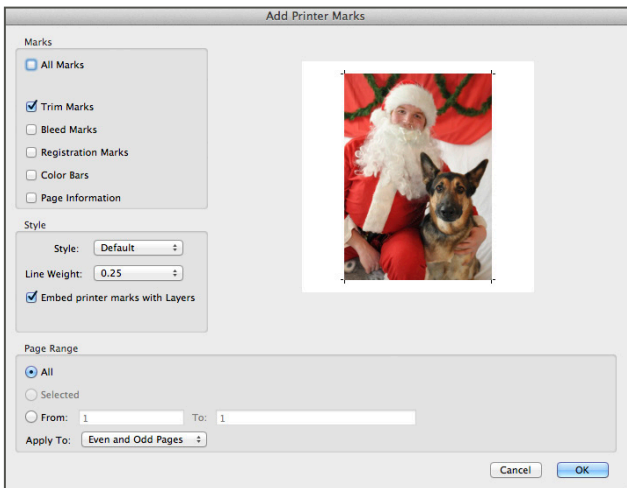

From the Set Page Boxes dialog menu, you will be increasing the canvas size of your image.

Change Page Size > Custom

Increase the page size by an inch on both the Width and the Height.

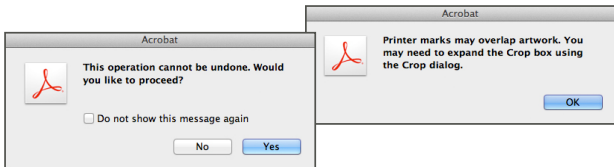

If adding crop marks on multiple pages, select All under the Page Range section.

Click OK.

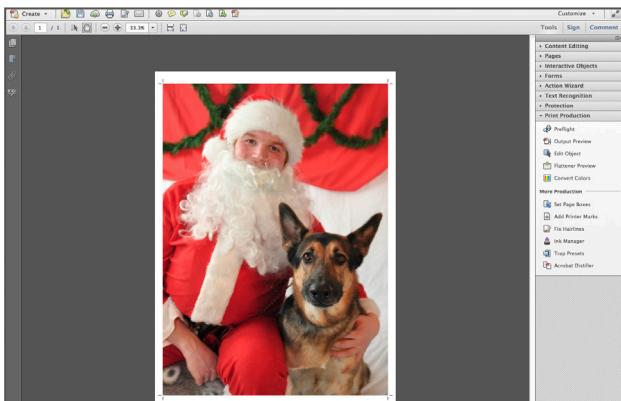

Print Production > Add Printer Marks.

From the Add Printer Marks dialog box, you can select Trim Marks, Bleed Marks, Registration Marks, etc. If adding crop marks on multiple pages, select All under the Page Range section.

Acrobat will display two pop-ups, one warning you that the operation cannot be undone and the other that you may need to expand the crop box. You've already done this; click Yes and OK to proceed.

You should now see your final image with the addition of crop marks. Save As.
